

APPLICATION INSTRUCTIONS

ELONGATED DECALS

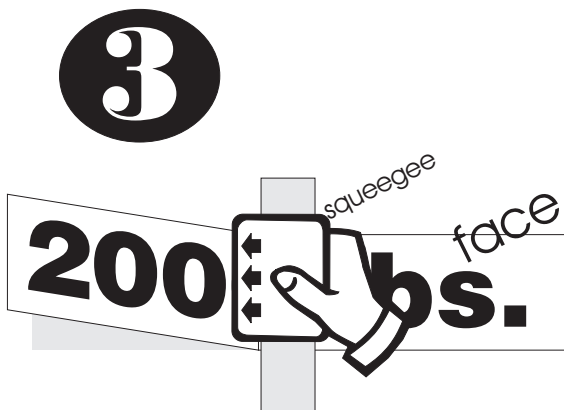

You will need masking tape, a squeegee, the decal to apply and possibly scissors.

Position decal at proper location and apply vertical "hinge" of masking tape.

Fold left half of decal over, peel face from liner of decal and cut off liner (if not slit). If slit be sure the tape is near but not over the slit. Fan decal back and peel off one side of the liner.

While holding the peeled side slightly away from the surface squeegee the left half down to substrate using soft, then harder strokes from center out. Care should be taken to not trap air bubbles. The adhesive will grab immediately.

Remove masking tape and fold opposite half of decal over and discard liner. Squeegee this side down, in the same manner.
